                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Application US/08539666
Patent No. 5766918
GENERAL INFORMATION:
APPLICANT: Petre, Dominique
APPLICANT: Mayaux, Jean-Francois
APPLICANT: Mayaux, Jean-Francois
APPLICANT: Feh, Patrice
TITLE OF INVENTION: No. 5766918el Polypeptides, The DNA Sequences
TITLE OF INVENTION: Allowing their Expression, Method of Preparation, and
TITLE OF INVENTION: Unilization
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
ADDRESSEE: Dunner
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 18; DB 1; Length 521; Pred. Batent No. 6340566

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: MCCUTHEN-MALONEY, SANDRA

APPLICANT: LAWRENCE LIVERMORE NATIONAL LABORATORY

TITLE OF INVENTION: DETECTION AND QUANTITATION OF SINGLE NUCLEOTIDE

TITLE OF INVENTION: DOLYMORPHISMS, DNA MISMATCHES

FILE REFERENCE: IL-10689

CURRENT APPLICATION: NUMBER: US/09/651,656

CURRENT FILING DATE: 2000-08-29

PRIOR FILING DATE: 2000-03-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

A; Title: Relationship between the major protein kinase C substrates acidic 80-kDa protein
or equivalent genes in different species.
A; Reference number: $29267; MUID: 93011168
A; Accession: $29269
A; Molecule type: mRNA
A; Residues: 189-223, R*, 225-234, E; 236-322 < HERS
C; Comment: This protein is a major cellular substrate for protein kinase C and plays a r
C; Comment: It binds to calmodulin in one to one molar ratio in the presence of calcium a
C; Genetics:
